

Detect the Silent Trigger Behind Abnormal Blood Clotting

Significance

The Lupus Anticoagulant (Screening And Confirmatory) is used to detect lupus anticoagulants, which are abnormal antibodies that can increase the risk of unwanted blood clot formation. It helps in diagnosing autoimmune and clotting-related conditions such as antiphospholipid syndrome (APS), recurrent miscarriages, deep vein thrombosis (DVT) and unexplained clotting disorders. The screening test identifies the possible presence of these antibodies, while the confirmatory test verifies the results for accurate diagnosis and better treatment planning.

Lupus Anticoagulant (Screening And Confirmatory)

(3 Parameters)

₹2800/-

Hematology (3)

- Ratio of la1/la2
- Lupus Anticoagulant Screening
- Lupus Anticoagulant Confirmatory

The sample should reach the processing lab within 8 hrs of collection

First National Diagnostic Chain to have **100%** of its Labs with **NABL Accreditation**[#]

CAP
From 2007

Trust that Thyrocare reports are **Accurate & Reliable***

Reports are released within an average **TAT of ~3.5 hours** of samples reaching the lab

*[#]As on 5th December 2024 | *As per a survey on doctors' perception of laboratory diagnostics (IJARIIT, 2023)*
